

ABSTRACT

An object of the present invention is to provide soft capsule formulations of active vitamins D<sub>3</sub> well-suited to practical production with easy discrimination of active ingredient levels, in which stability of the active vitamins D<sub>3</sub> to light and heat is ensured, and which material is highly safe to the human body. According to the present invention, soft capsule formulations of active vitamins D<sub>3</sub> can be obtained wherein the capsule shell contains a white pigment and yellow iron oxide and/or red iron oxide, or titanium oxide and caramel, or yellow iron oxide.
